PRINCIPAL'S MESSAGE

The monsoon has arrived, bringing with it the magic of growth and renewed life.
Just as the first showers soften the earth and coax new leaves to unfurl, the classrooms buzz with curiosity, fresh ideas and new girls!

It should inspire poetry but I'll make do with a limerick:

The monsoon season at school,
Is about puddles and pools.
When rain falls at games,
No one complains -
Instead there's giggles, gossip and of course no games!

EDITORIAL

The first drop of rain on dry ground is always special. As the monsoon finally arrives, it brings a kind of magic with itself. And almost overnight, bright green leaves replace the dusty brown of summer. The sweet smell of wet earth fills the air, telling us that a big change is here. It makes the whole world feel fresh and alive.

But the rainy season is about more than just cooling down. It is a perfect symbol for a fresh start. Just as the heavy rain washes the dirt from the trees, it gives us a chance to wash away our own worries and begin again. The monsoon shows us that no matter how tough the dry summer was, life always bounces back.

As you flip through this month's edition, let the rhythm of the falling rain inspire you. Embrace this monsoon magic. Allow the season to clear your mind and foster a flourishing new beginning.

Happy reading!

LEARNING AND STUDYING: TWO DIFFERENT THINGS

Are learning and studying the same thing? Not exactly. Although these words are often used interchangeably, they have different meanings.

Studying is the process of reading, revising, and memorising information, usually to prepare for an examination. It helps us remember facts, formulas, and definitions. However, studying alone does not always lead to understanding.

Learning, on the other hand, is a deeper process. It involves understanding concepts, analysing ideas, and applying knowledge to real-life situations. True learning enables us to think critically, solve problems, and make informed decisions.

For example, a student may memorise mathematical formulas while studying, but unless they understand when and how to apply them, solving unfamiliar problems becomes difficult. Similarly, in science, learning helps us understand why things happen rather than simply remembering facts.

Although learning and studying are different, they complement each other. Studying provides the foundation, while learning gives knowledge meaning and purpose. Together, they help us grow academically and personally.

In conclusion, studying helps us acquire information, while learning helps us understand and use it effectively. To succeed in life, we need both. We should build a strong foundation through study while remaining curious enough to explore, question, and learn beyond textbooks

A Friend Like You

*My life was dark,
But when I met you,
The world seemed brighter,
My skies turned blue.*

*My darkest days
Turned into light,
You helped me shine
So warm and bright.*

*Just like a team
That wins a trophy,
I found the greatest gift—
A friend like you.*

*When God created us,
He knew we'd always be
Like two peas in a pod,
Best friends forever.*

*If you weren't there,
I don't know what I'd do.
Like a candle in the dark,
You always guide me through.*
